Cleveland, OH | evaregelski@gmail.com | evaregelski.github.io | [LinkedIn](#)

PROFILE

UX designer specializing in complex, data-dense enterprise products for technical users in regulated domains. Owns the full arc from user research and workshop facilitation through design systems, high-fidelity prototypes, and UX QA. A strong cross-functional collaborator who works hand in hand with engineering, product leadership, customer success, and sales. A marketing analytics background brings a business and data lens, and fluency in HTML, CSS, and JavaScript keeps designs grounded in real delivery constraints.

PROFESSIONAL EXPERIENCE

Lead UX/UI Designer | Cyberstar Software Feb 2024 – Present

Sole designer for compliance software used by Department of Defense agencies to manage cybersecurity workforce qualification under the DoD Cyber Workforce Framework (DCWF 8140/8570).

- Owns research, design, and UX QA for all new features and feature reworks, including the end-to-end redesign of the Management Dashboard, the primary tool compliance leaders use to monitor workforce readiness. Research revealed the binary compliant/non-compliant model didn't match how managers triage, driving a rebuild around a multi-tier qualification taxonomy.
- Works cross-functionally with executives, engineering, customer success, and sales; facilitates design studios using assumption mapping and an evidence-vs-importance matrix to align teams on a validated scope within a six-engineer delivery constraint.
- Established design principles and a scalable design system and component library; designs to Section 508 accessibility standards, encoding status through labels and counts rather than color alone.
- Builds interactive prototypes in Figma and Claude Design that stakeholders and engineers can inspect directly, and contributes front-end code to reduce ambiguity at handoff.
- Translated a full application audit into a prioritized UX backlog; supports marketing for conferences and sales demos.

UX Designer | KeyBank Aug 2022 – Jan 2024

- Designed and launched 10+ end-to-end campaign journeys, leading research, strategy, UX flows, high-fidelity prototypes, and testing in partnership with cross-functional product, marketing, and technology teams.
- Designed a Wealth Leadership Dashboard surfacing real-time segment performance data for faster leadership decisions.
- Led design and delivery of 5 new features and tools that streamlined workflows and improved satisfaction for customers and internal teams.
- Facilitated 5 cross-functional design-thinking workshops, and presented research insights from interviews, surveys, usability testing, and competitive benchmarking to stakeholders.

Lead UX Designer & Researcher | Mappa Apr 2022

- Led competitive analysis and 10 user interviews to define personas and core needs for a location-aware game, then facilitated a collaborative design studio to create user flows, sketches, and wireframes.
- Built high-fidelity mobile and desktop prototypes in Figma and delivered specs for client handoff.

Digital Marketing Specialist | Kinnect Aug 2020 – Dec 2021

- Developed donor communication strategy and brand materials, contributing to \$55,000 in fundraising.
- Grew social media followings by 200% across three platforms through data-driven strategy, and led the redesign of the company website.

Marketing & Emerging Talent Network Associate | JumpStart Inc. May 2019 – Aug 2019

- Designed 15+ Excel tools to streamline employer and student data management and created 30+ marketing materials, contributing to a 20% increase in program event attendance.

EDUCATION

B.S. Marketing Management | Case Western Reserve University Aug 2016 – Aug 2020 — Minors: Computer Science, Studio Art

UX/UI Immersive | General Assembly Jan 2022 – Apr 2022

AREAS OF EXPERTISE

UX & Product: User research, usability testing, contextual inquiry, personas, information architecture, wireframing, prototyping, design systems, interaction design, UX QA, Section 508 accessibility

Research & Facilitation: Cross-functional collaboration, design studio facilitation, assumption mapping, feature prioritization, stakeholder workshops, competitive benchmarking, concept testing

Data & Analytics: Google Analytics, Tableau, Excel, Salesforce, dashboard design, data visualization

Design & Dev: Figma, Claude Design, Adobe Suite, Procreate, Canva, HTML, CSS, JavaScript, interactive React-based prototyping
